

P01 Pilot — Concept Note for Store Management Review

Supply Chain First

What's Being Proposed

A four-week, no-cost pilot of P01 — a smartphone-based inventory counting platform — in one of your stores, running alongside your normal operations.

The Problem This Solves

Physical stock counts currently rely on paper sheets or handheld devices, tie up staff for hours, and disrupt the sales floor. Manual consolidation afterward adds delay and introduces errors before management gets usable numbers.

What Changes for the Store

Counting staff use their own or store-provided smartphones to scan barcodes and log counts — multiple people counting different sections at once, with results syncing to a central dashboard automatically. No new hardware, no handheld devices to procure or maintain.

What's Required From the Store

- One nominated project contact
- 5–20 staff involved in counting
- Time for a short onboarding/training session
- One live count session during the pilot (Week 2), run as close to normal operating conditions as possible
- Feedback shared honestly throughout — this shapes the product before wider rollout

How We'll Know If It Worked

Before anything changes, we record your store's current numbers — how long a count takes today, current discrepancy rate, current consolidation time. Every result during the pilot is measured against that starting point, not against a generic promise.

Support During the Pilot

Email and WhatsApp support, with a 4-hour response commitment on anything that stops a count in progress. Weekly check-ins with the SCF team throughout.

Your Data

Count data belongs to the store's organisation throughout and after the pilot. It's kept 60 days after the pilot ends, then deleted, unless you ask us to export it or you continue using the platform. Nothing

about your store is used publicly without your written approval.

What This Isn't

This pilot doesn't touch your ERP or POS systems, doesn't replace them, and doesn't come with a sales obligation. If it doesn't work for your operation, you walk away with no cost and no commitment.

Timeline at a Glance

Week 1: baseline & setup → Week 2: live count →
Week 3: optimisation & indicative pricing shared →
Week 4: results review

Decision Point

At the end of four weeks, we review the results together against your baseline. You decide from there whether P01 fits your operation going forward.
